Abstracts

Halogen reactive dyes are a specialized class of synthetic colorants used primarily in the textile industry for dyeing cellulosic fibers such as cotton, viscose, and linen, where they form covalent bonds with the fiber molecules under alkaline conditions, resulting in excellent wash and light fastness properties; these dyes are characterized by their reactive halogen groups (typically chlorine or fluorine) that facilitate fixation to the substrate, offering advantages like vibrant shades, high color yield, and relatively low environmental impact compared to some alternative dye classes due to improved exhaustion and fixation rates.

The global Halogen Reactive Dyes market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
