Abstracts

Aogen Source White Light Interferometer is a high-resolution optical instrument used for measuring surface characteristics, such as height, roughness, and thickness. It works by utilizing a halogen light source to generate white light, which is split into two beams. One beam is directed towards the test surface, while the other is reflected from a reference surface. The interference between the two beams is detected and analyzed to determine the surface properties. This interferometric technique provides accurate measurements with sub-nanometer resolution, making it invaluable in industries like semiconductor manufacturing, precision engineering, and research and development. The Halogen Source White Light Interferometer offers non-contact, versatile, and precise surface metrology for a wide range of applications.

The global Halogen Source White Light Interferometer market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
