Abstracts

Halogen tungsten lamps are incandescent light sources that utilize a tungsten filament enclosed within a compact quartz or high-silica glass envelope filled with halogen gas, operating on the halogen cycle principle where evaporated tungsten redeposits on the filament rather than accumulating on the bulb wall, resulting in higher luminous efficacy, longer lifespan, and maintained light output compared to traditional incandescent bulbs, with applications spanning residential, commercial, automotive, and specialized industrial lighting due to their bright, crisp white light and excellent color rendering properties.
