Report Overview

Halogenated Flame Retardant PBT refers to Polybutylene Terephthalate, a high-performance engineering thermoplastic, that has been modified with flame retardant additives containing halogen elements. Halogenated flame retardants, typically incorporating bromine or chlorine, are known for their effectiveness in suppressing combustion and improving the fire resistance of polymers. However, there are environmental and health concerns associated with the use of halogenated flame retardants, particularly due to the release of toxic by-products during combustion. It's important to note that there is an ongoing shift towards halogen-free alternatives in various industries.
