Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Halogenating Reagents competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Halogenating agents refer to chemical reagents containing halogen elements (such as fluorine, chlorine, bromine, and iodine), which are often used to introduce halogen atoms in organic synthesis. They can replace certain groups (such as hydroxyl groups) in organic molecules with halogens, thereby changing the chemical properties and reactivity of the molecules. Common halogenating agents include thionyl chloride (SOCl₂), hydrogen bromide (HBr), phosphorus iodide (PI₃), etc., which are widely used in the preparation of halogenated hydrocarbons, drug intermediates, and other organic synthesis reactions.

The global Halogenating Reagents market size was estimated at USD 428.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
