Report Overview

Security has been a key concern for enterprises, banks, government organizations, telecommunication and hospitals as well as for individuals to secure data and assets. Keys, identity badges, and numeric keypads are used to prevent unauthorised access. Hand geometry biometrics deals with the structure of palm and fingers of an individual, width of the fingers, and thickness of the palm. Hand geometry scanners with infrared light and reflectors can be used for capturing the image. Since these features of an individual are not unique, hand geometry biometrics is not considered to be a fruitful method for the identification and verification of individuals. However, organizations are integrating hand geometry biometrics with smart cards to ensure improved verification of individuals. Multimodal biometrics is also another technique that is being used for authenticating individuals.

The global Hand Geometry Biometrics market size was estimated at USD 4751.50 million in 2023 and is projected to reach USD 14431.92 million by 2030, exhibiting a CAGR of 17.20% during the forecast period.

North America Hand Geometry Biometrics market size was USD 1238.11 million in 2023, at a CAGR of 14.74% during the forecast period of 2024 through 2030.
