Abstracts

A hand-held ultrasound nebulizer is a portable medical device that uses high-frequency ultrasonic waves to convert liquid medication into a fine mist, enabling effective inhalation therapy for respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and bronchitis. Unlike traditional compressor-based nebulizers, ultrasonic nebulizers operate quietly and efficiently, producing smaller aerosol particles that penetrate deeper into the lungs for enhanced drug absorption. Their compact and lightweight design makes them ideal for home use, travel, and emergency situations, offering greater convenience and accessibility for patients requiring frequent respiratory treatment.

The global Hand-held Ultrasound Nebulizer market size was estimated at USD 377.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
