Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hand Held Welding System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of hand held welding systems will reach 17,000 units, with an average selling price of US\$27,610 per unit. A hand held welding system is a portable welding device that integrates a portable power supply, welding gun, control unit, and auxiliary modules (such as a wire feeder and gas supply). It is designed for on-site operations, mobile workstations, or welding complex structures. Its core feature is flexible deployment through manual operation, supporting multiple welding processes (such as MIG/MAG, TIG, arc welding, and laser welding). It also features intelligent functions such as parameter presets, dynamic adjustment, and fault self-diagnosis to accommodate welding requirements for different materials (such as carbon steel, stainless steel, and aluminum alloy) and thicknesses. It also meets the process requirements of high precision, low heat input, and low spatter. It is widely used in aerospace, automotive maintenance, shipbuilding, pipeline engineering, and outdoor emergency repair. The upstream of the handheld welding system industry chain is key materials and core components (metal raw materials, lasers, optical components, electronic components, control systems, etc.), represented by Nippon Steel, POSCO, Trumpf, IPG Photonics, Han's Laser, Maxphotonics, JPT Optoelectronics, Xinghan Laser, etc., which support equipment performance and stability; the midstream is equipment manufacturing and system integration, covering Han's Laser's "Fengmang" series, Maxphotonics' "Hongtong K1M", HGTECH, Trumpf handheld welding, IPG Photonics handheld systems, JPT ring laser welding equipment, etc., to achieve vertical integration from devices to complete machines; the downstream is the application fields (automotive manufacturing, electronics and electrical appliances, medical equipment,

hardware and building materials, aerospace, etc.), such as automobile body welding, precision connection of electronic components, welding of titanium alloy brackets for medical equipment, splicing of building metal structures, welding of aerospace engine blades, etc., to meet the needs of efficient, high-precision and flexible welding.

The global Hand Held Welding System market size was estimated at USD 469.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
