Abstracts

A hand hygiene monitor system is an automated technological solution designed to observe, record, and provide feedback on hand hygiene compliance among healthcare workers and other personnel in settings where infection control is critical. These systems typically utilize a combination of sensors, IoT devices, wearables, or computer vision to detect hand hygiene events?such as the use of soap dispensers, sanitizer stations, or handwashing sinks?and correlate them with staff movements in and out of patient or high-risk zones. By capturing real-time data, these systems help organizations identify gaps in hygiene protocols, reduce healthcare-associated infections (HAIs), and support compliance with regulatory standards through objective, data-driven insights rather than manual audits or self-reporting.

The global Hand Hygiene Monitor System market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
