Abstracts

The pistol grip is an important part of the pistol, located at the bottom of the gun frame for the user to hold to stabilize and control the pistol. Its main functions are to provide a comfortable grip, enhance shooting stability, and assist in operating the trigger. The grip is usually made of a non-slip material (such as rubber, polymer, or wood), and the surface may be textured or grooved to increase friction. Modern pistol grips may also integrate modular designs, allowing users to adjust the size and shape according to hand shape or personal preference. In addition, some grips have built-in battery compartments or accessory rails to support the installation of accessories such as laser pointers or tactical lights.
