Report Overview
A barcode (also bar code) is a machine readable representation of information (usually dark ink on a light background to create high and low reflectance which is converted to 1s and 0s, which is a binary language that computers use. Originally, barcodes stored data in the widths and spacing's of printed parallel lines, but today they also come in patterns of dots, concentric circles, and text codes hidden within images. Barcodes can be read by barcode scanners, also known as barcode readers. Barcodes are widely used to implement Auto ID Data Capture (AIDC) systems that improve the speed and accuracy of computer data entry.
A barcode scanner simply eliminates keyboard strokes and provides an efficient and accurate way of transferring barcoded data into an application. Simultaneously, barcode scanners eliminate the need for pens & paper. They improve the speed and accuracy of computer data entry and improves overall business efficiencies.
A Handheld Barcode Scanners is any scanner that is held in the hand of the user during operation. Most handheld scanners are designed like a handgun, with a grip and a trigger to activate the scanning operation.
