Report Overview

Handheld intelligent imaging equipment refers to imaging devices that have computing processing capabilities and can be used handheld. It evolved from traditional imaging equipment and is a product of the combination of traditional imaging equipment with computer technology, data processing technology, sensor technology, network communication technology, power electronics technology, etc. It mainly includes shooting equipment such as panoramic cameras and motion cameras. Handheld smart cameras are not limited to the field of film production, but also play an important role in sports events, education and training, as well as personal self media. Whether it's professional level content creation or recording in daily life, this type of camera is one of the important tools in the era of new media. According to different usage scenarios and performance requirements, handheld smart cameras on the market are mainly divided into two categories: panoramic cameras and motion cameras. Panoramic cameras are divided into consumer grade and professional grade. The former focuses on usability and cost-effectiveness, allowing ordinary users to easily create and share panoramic content, while the latter focuses on providing a professional grade 360 degree panoramic shooting experience with high resolution and multi lens systems. The camera, with its lightweight, durable, and easy to carry characteristics, accurately meets the demand of this specific user group for high-quality image recording equipment. However, consumer grade handheld intelligent panoramic cameras still have limitations in terms of technological maturity and application scenario expansion, resulting in relatively limited market size.
