Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Handheld POS Printer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of handheld POS printers reached 30.5 million units, with an average price of US\$39.6 per unit. A handheld POS printer is a compact, all-in-one device that combines a point-of-sale (POS) terminal with a built-in receipt printer, allowing businesses to process payments and print receipts on the go. These portable systems often include a touchscreen, card reader, and sometimes a barcode scanner, making them ideal for mobile businesses like those in retail, hospitality, and delivery services. The upstream of handheld POS printers mainly includes suppliers of thermal printheads, MCU control chips, battery modules, structural components, and Bluetooth/4G communication modules. Representative companies include Rohm, Epson, Sunlord, ATL, and Quectel. Downstream sectors cover restaurant chains, retail stores, logistics and distribution, food delivery platforms, and mobile government services. Starbucks, 7-Eleven, SF Express, Meituan, and police mobile terminal integrators are typical purchasers. Downstream demand is concentrated in scenarios such as mobile payment, paperless invoicing, and on-site service settlement. The core decision-making factors are battery life, printing speed, device weight, and compatibility with POS systems. Therefore, there is a preference for large-volume centralized procurement, especially driven by the food delivery and retail industries, which have fueled rapid equipment iteration. The industry development trend is characterized by high mobility, lightweight design, and high integration. Typical paths include integrating printing, scanning, and payment modules into the same terminal, and improving connectivity stability with mobile phones or PDAs through Bluetooth LE and 4G-M modules. The driving factors include the widespread adoption of contactless payments,

the growth of instant delivery and mobile office, and the increased penetration rate of SaaS-based POS systems. The declining prices of low-power thermal components are also contributing to overall cost optimization. The main obstacles include battery safety and endurance bottlenecks, compatibility challenges between different software platforms, rising industrial design costs, and stringent downstream requirements for equipment reliability, such as the logistics industry's requirement for stable printing under high temperatures, rain, and vibration. The industry's annual single-line output is typically between 80,000 and 120,000 units, with gross profit margins generally ranging from 18% to 28%.

The global Handheld POS Printer market size was estimated at USD 1208.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
