Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Handheld POS Terminal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Handheld POS (Point-of-Sale) Terminal is a portable electronic device used to process payment transactions wirelessly. It integrates functions such as card reading (magnetic stripe, chip, contactless/NFC), barcode scanning, receipt printing, and mobile connectivity (Wi-Fi, 4G). Handheld POS terminals are widely used in retail, hospitality, logistics, healthcare, and mobile sales environments, enabling merchants to complete transactions anytime and anywhere. In 2024, global Handheld POS Terminal production reached approximately 51.32 million units, with an average global market price of around US\$ 59.32 per unit. The steady global move away from cash is one of the most powerful drivers of handheld POS adoption. Contactless card growth? In 2024, over 90% of newly issued payment cards worldwide were contactless-enabled, ensuring that NFC capability is now a must-have in POS devices. Consumer behavior changes? The pandemic normalized tap-to-pay, mobile wallets (Apple Pay, Google Pay), and QR-based transactions, pushing merchants to upgrade to devices that support these payment modes. Regulatory and banking initiatives? Many countries, from the EU to parts of Asia-Pacific, are promoting cashless ecosystems through incentives and infrastructure support, creating a favorable environment for handheld POS rollout. Modern commerce increasingly requires taking the checkout to the customer rather than forcing the customer to a fixed terminal. In retail, handheld POS terminals enable aisle-side checkout, reducing wait times and freeing counter space. In hospitality, they allow tableside ordering, split-bill payment, and instant tip collection. In delivery and logistics, handheld POS devices can process payments at the customer's doorstep. This anywhere transaction model improves customer experience and sales

conversion, making mobility a competitive advantage. Small businesses, pop-up shops, and independent service providers often cannot justify a large, fixed POS system. Handheld POS terminals offer: Lower upfront cost compared to traditional POS setups. Portability for on-the-go selling (fairs, markets, events). Easy integration with smartphones or tablets in hybrid mPOS setups. The boom in micro-merchants? especially in developing markets? has created a large addressable base for affordable, durable handheld devices.

The global Handheld POS Terminal market size was estimated at USD 3044.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
