Report Overview:

An RFID reader, also known as an interrogator, is a device that provides the connection between the tag data and the enterprise system software that needs the information. The reader communicates with tags that are within its field of operation, performing any number of tasks including simple continuous inventorying, filtering (searching for tags that meet certain criteria), writing (or encoding) to select tags, etc. The reader uses an attached antenna to capture data from tags. It then passes the data to a computer for processing. Just like RFID tags, there are many different sizes and types of RFID readers. Readers can be affixed in a stationary position in a store or factory, or integrated into a mobile device such as a portable, handheld scanner. In this report, we focus on the handheld type RFID reader.

The Global Handheld RFID Reader Market Size was estimated at USD 1889.44 million in 2023 and is projected to reach USD 2336.10 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
