## Abstracts

Thermal Anemometers are an effective means of measuring fluid velocity (for example air velocity). This is done by sensing the changes in heat transfer from an electrically heated element that is in direct contact with the fluid (or air). One form of this instrument is referred to as a constant temperature anemometer where the cooling effect resulting from the air flowing over the element is balanced by the electrical current to the element. The thermal anemometer output is transmitted to a computer for data collection and analysis. Global key players of Thermal Anemometer include Testo, TSI Incorporated and KANOMAX, etc. The top five players hold a share over 37%. Asia-Pacific is the largest market, has a share about 38%. In terms of product type, Constant Temperature Anemometer is the largest segment, occupied for a share of about 52%, and in terms of application, HVAC has a share about 75 percent.

The global Thermal Anemometer market size was estimated at USD 362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
