Abstracts

Ultrasonic handheld welders belong to the category of ultrasonic welding, which uses ultrasonic waves to generate high-frequency vibrations to weld two materials, metal or plastic. For hot-formed parts without assembly contours, or parts whose geometry and actual conditions exclude the possibility of standard welding operations, ultrasonic welding is relatively more suitable for processing. The handheld ultrasonic welding equipment is a small machine, which is relatively light to operate and does not require high manual technology. It is convenient to store after use and does not take up a lot of space. Ergonomics and lightweight handheld probes can reduce operator fatigue.
