Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HAPS Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High Altitude Platform Station (HAPS) is an innovative technology that provides a wide-area communication network using unmanned aircraft in the stratosphere (about 20 kilometers above the Earth's surface). Unlike satellite phones, HAPS uses the same radio waves as ground stations, but at a closer distance. This enables high-speed, stable communication with existing smartphones without the need for dedicated equipment. As a result, HAPS is gaining attention as a new communication method for areas with insufficient ground infrastructure and as an emergency communication system during disasters. The HAPS battery is a high-performance battery designed to operate in the extreme stratospheric conditions where the High Altitude Platform Station (HAPS) provides wireless communication.

The global HAPS Battery market size was estimated at USD 65.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global HAPS Battery market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
