## Abstracts

A Haptic Trackpad Module is a touch-sensitive input device that uses haptic feedback to simulate the sensation of pressing physical buttons, even though the surface is flat and solid. Instead of traditional mechanical clicks, it relies on actuators—often piezoelectric or linear resonant actuators—to generate vibrations or force responses when the user touches or taps the surface. These modules are commonly found in modern laptops, smartphones, and wearable devices, offering a more durable, sleek, and customizable user experience compared to mechanical touchpads.

The global Haptic Trackpads Module market size was estimated at USD 205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
