## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hard Coat Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hard Coat Film market reached approximately 40 million square meters, with an average global market price of around US\$ 16 per square meter. Hard Coat Film is a transparent or translucent plastic film (commonly made from PET, PC, or acrylic base materials) that has been coated with a thin, hardened surface layer designed to improve scratch resistance, abrasion resistance, and chemical durability while maintaining excellent optical clarity. This special hard coating not only makes the film more durable but can also add functional properties such as anti-glare, anti-fingerprint, UV resistance, and anti-graffiti protection. Because of these qualities, hard coat films are widely used in touchscreens, automotive displays, consumer electronics, industrial panels, medical devices, and protective surface applications.
