The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hard Copper Stranded Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global production of Hard Copper Stranded Wire was approximately 12,000 tons, with an average selling price of about US$11,200 per ton. Single-wire production capacity was approximately 800 tons per year, with an average gross profit margin of 15-18%. Hard Copper Stranded Wire is a conductor made by twisting multiple hard copper wires together, possessing excellent conductivity and high mechanical strength. Compared to single-core hard copper wire, it is more flexible and less prone to tangling, making it easier to manage. This makes it widely used in power, communications, construction, electronic equipment, and automotive electrical systems.The upstream raw material for Hard Copper Stranded Wire is mainly electrolytic copper, the price of which directly determines the cost. Downstream applications are extensive, with core areas including power system transmission and distribution lines, transformers and switchgear connections, as well as photovoltaic power plant busbars, wind farm power collection, and internal connections for new energy vehicle charging piles. It is also indispensable in electrical wiring for building engineering, rail transportation, and industrial equipment.

The global Hard Copper Stranded Wire market size was estimated at USD 134.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
