Abstracts

Hard disk drives (HDDs) are non-volatile data storage devices that use rapidly rotating magnetic platters and read/write heads to store and retrieve digital information, offering high-capacity storage solutions primarily for enterprise servers, data centers, network-attached storage (NAS) systems, personal computers, and consumer electronics. They are characterized by their cost-effectiveness per terabyte compared to solid-state drives (SSDs), making them ideal for bulk storage applications, though they generally feature slower read/write speeds, higher power consumption, and mechanical components that are susceptible to physical shock and wear. The market for HDDs remains significant despite growing SSD adoption, driven by escalating data generation, cloud storage expansion, and demand for affordable high-capacity archival and backup solutions in both commercial and consumer segments.

The global Hard Disk Drives (Hdds) market size was estimated at USD 31500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -4.50% during the forecast period.
