Abstracts

Hard drive duplicators are specialized devices used to create exact sector-by-sector copies of data from one or more source hard drives to multiple target drives simultaneously, designed primarily for data replication, backup, archival, and forensic applications in environments requiring high-volume, high-speed, and error-free duplication without reliance on host computers or operating systems. These systems range from standalone units with integrated controllers and displays to more advanced rack-mounted or network-attached models, often supporting various drive interfaces (such as SATA, SAS, NVMe, or USB) and incorporating features like data wiping, hashing for integrity verification, and scripting for automated workflows to meet the demands of enterprise IT, law enforcement, media duplication, and data recovery sectors.
