Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hard Magnetic Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hard magnetic materials are permanent-magnet alloys and ceramics engineered to maintain strong magnetization after an external magnetic field is removed, typically characterized by high coercivity, high remanence, and stable performance under heat, vibration, or demagnetizing forces; the supply chain begins with mining and refining of rare-earth oxides (Nd, Pr, Dy, Sm), iron, cobalt, nickel, and ferrite precursors, followed by powder metallurgy steps such as alloy melting, strip-casting, jet-milling, pressing (isostatic or die-pressed), sintering, grain-boundary diffusion, machining, coating (Ni, epoxy, or conversion layers), and precision magnetization, with downstream integration into motors, actuators, sensors, generators, and magnetic assemblies by OEMs across automotive, industrial automation, consumer electronics, defense, and renewable-energy sectors. In 2024, global hard magnetic materials output reached 1.95 million tons versus 2.3 million tons of capacity, with unit prices from USD 9,000 to 22,000 per ton, while producers maintained an average 30% gross margin, higher for rare-earth magnet grades.

The global Hard Magnetic Material market size was estimated at USD 26800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
