Abstracts

Hard Tooth Surface Reducer is a precision mechanical transmission device. It uses hard tooth surface gear transmission to achieve power transmission and speed regulation through gear meshing. When the input shaft drives the high-quality gear to rotate, the spur and helical teeth of the gear mesh with each other. Through the transmission of the gear, the torque is transmitted from the input shaft to the output shaft, thereby reducing the speed and increasing the torque. Hard tooth surface reducer has the characteristics of high precision, high load-bearing capacity, high transmission efficiency, smooth operation, low noise, small size and light weight. It is widely used in metallurgy, mining, lifting, transportation, cement, construction, chemical industry, textile, printing and dyeing, pharmaceutical and other fields.
