Abstracts

Hardware-mounted baby gates are safety devices designed to be permanently affixed to walls, door frames, or stairway banisters using screws or bolts, providing a sturdy barrier to prevent young children from accessing hazardous areas such as staircases, kitchens, or rooms with potential dangers. Unlike pressure-mounted gates, which rely on tension and are generally less secure, hardware-mounted models offer superior stability and are recommended by safety experts for use at the top of stairs or in high-risk locations where a fall could cause serious injury. These gates typically feature a latching mechanism that can be operated with one hand by adults but remains difficult for toddlers to unlock, and they are constructed from durable materials such as metal, wood, or high-impact plastic to withstand repeated use and pressure.

The global Hardware Mounted Baby Gates market size was estimated at USD 220.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
