Abstracts

Harmonic Drive is a compact, high performance, precision reduction gear. It is one of the key components used in robotic products such as collaborative work robots. The gear consists of only 3 basic parts (Wave Generator, Flex spline, and Circular Spline). It provides excellent features not found in other speed reducers. Japan HDSI currently holds the core technology of harmonic drive reducers and forms a technical barrier to high-performance reducers. It is difficult for companies in other regions to reach their technical level. Due to the strong market demand in China, more and more Chinese companies have entered the industry, and many companies have expansion plans. For example, Shenzhen Han's Motion Technology is a good new entrant. In 2022, the sales volume of harmonic reducers has reached 98,080 units. In the United States, Canada, and South Korea also have R&D and production companies.

The global Harmonic Drive Gear market size was estimated at USD 679.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Harmonic Drive Gear market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
