HAZOP service is a widely used systematic analysis method in the field of industrial design, aimed at identifying and assessing potential hazards and operability issues in process systems. This method combines knowledge from multiple disciplines, including engineering, safety, and operations, and employs systematic guide words and technical means to conduct in-depth analysis of process parameters and operating procedures. Typically conducted in meeting format, the HAZOP team identifies deviations in the process through questioning and discussion, including risks arising from equipment failures, human errors, and changes in the external environment.
