Abstracts

R22 refrigerant is a chemical that keeps the air coming from your air conditioning system cool, so it's unquestionably incredibly important. Most air conditioning units older than 10 years utilize an AC refrigerant called R22 that's commonly identified as Freon*, and is noted by the EPA as HCFC-22. The HCFC-R22 refrigerant market is currently driven by a combination of factors. First, the phase-out of ozone-depleting substances (ODS) under the Montreal Protocol has led to a reduction in the production and consumption of HCFCs, including R22. This has created a growing demand for alternative refrigerants that have lower ozone depletion potential (ODP) and global warming potential (GWP). Second, regulations and environmental policies imposed by various governments and international organizations have restricted the use of HCFC-R22 refrigerant. These regulations aim to minimize the impact on the ozone layer and mitigate climate change. Third, technological advancements in refrigeration and air conditioning systems have led to the development of more energy-efficient and environmentally friendly alternatives to R22. These alternatives, such as hydrofluorocarbons (HFCs) and hydrofluoroolefins (HFOs), are gaining popularity in the market. Additionally, market forces such as increased consumer awareness and sustainability initiatives by companies have also played a role in driving the shift away from HCFC-R22 refrigerant.

The global HCFC-R22 Refrigerant market size was estimated at USD 127.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
