Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HDBaseT Splitter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of HDBaseT splitter will reach 8.4 million units, with an average selling price of US\$300 per unit. An HDBaseT splitter is a device that distributes audio, video, and control signals based on HDBaseT technology. It transmits high-definition video (up to 4K/8K), audio, Ethernet, control signals (RS232, infrared), USB, and power (PoH) over long distances using a single standard Cat5e/6 network cable, simultaneously distributing a single signal source to multiple display terminals or receivers. Compared to traditional HDMI splitters, HDBaseT splitters offer advantages such as longer transmission distances (up to 100 meters or longer), more stable signals, and support for "5Play" multi-signal transmission. The core component is the HDMI converter chip, represented by Analog Devices, Lontium, and Parade. Downstream applications include enterprise, education, and broadcasting.

The global HDBaseT Splitter market size was estimated at USD 2531.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
