Report Overview:

High Density Interconnection (HDI) PCB circuit boards are relatively high in line distribution density using micro blind and buried hole technology. The most effective way to increase the density of circuit boards is to reduce the number of through holes and precisely set blind and buried holes to meet this requirement, thereby generating HDI circuit boards. This is a process that includes inner and outer layers, and then uses holes and metallization in the holes to achieve the function of joining each inner layer.

The Global HDI Board Market Size was estimated at USD 6628.31 million in 2023 and is projected to reach USD 9087.54 million by 2029, exhibiting a CAGR of 5.40% during the forecast period.
