The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HDMI Optical Fiber Extender competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the production volume of HDMI fiber optic extenders reached 515,300 units, with an average selling price of \$402 per unit. The annual production capacity of a single HDMI fiber optic extender production line is approximately 50,000 units, with a gross profit margin of approximately 28.4%. An HDMI fiber optic extender is a device used to transmit HDMI video and audio signals over long distances. It achieves long-distance, high-bandwidth, and interference-resistant transmission by converting the HDMI signal into an optical signal for transmission in optical fiber, and then converting the optical signal back into an HDMI signal at the receiving end. The upstream of the HDMI fiber optic extender industry chain includes optical modules and transceiver chips, optical fiber and cable materials, and components related to optical endfaces and optical path design. The midstream consists of HDMI fiber optic extender manufacturers, while the downstream mainly includes multimedia, command centers, and medical industries.
