## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HDPE Solid Wall Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. HDPE solid wall pipe is mainly processed from high-density polyethylene as the main raw material, with a single-layer structure and excellent corrosion resistance, chemical resistance, UV resistance, and low permeability. The pressure bearing capacity of HDPE pipes is mainly affected by the strength and wall thickness of the material itself. Generally, HDPE pipes are used for low to medium pressure applications, such as water supply and drainage systems. The common welding methods for HDPE pipes include hot melt connection and electric melt connection, with hot melt connection being more commonly used. Hot melt connection is achieved by heating pipes and joints to melt them, then quickly connecting and cooling them to form a firm connection. HDPE solid wall pipes have relatively low manufacturing costs, but their service life is short in harsh environments such as high temperature, high pressure, and wear, requiring frequent maintenance and replacement. In 2024, global HDPE Solid Wall Pipe production reached approximately 5103 K MT, with an average global market price of around US\$ 1694 per MT. The production capacity of a single small-diameter production line is around 1800 tons; The production capacity of a single medium caliber production line is around 3000 tons; The production capacity of a single large-diameter production line is about 5000 tons. The gross profit margin is around 20%. Upstream: PE solid wall pipes are made of PE80 and PE100 as raw materials. Downstream: Municipal engineering: the largest application area. Including urban and rural water supply networks, drainage/sewage networks, reclaimed water recycling systems, etc. Gas transmission: the field with the highest requirements for pipe quality and the highest certification barriers. Agricultural irrigation:

water-saving irrigation pipes. Raw material cost: 70% -85%; Manufacturing cost: 8% -15%; Direct labor cost: 3% -8%.

The global HDPE Solid Wall Pipe market size was estimated at USD 8645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
