Abstracts

Diaphragm Valves (or membrane valves) consists of a valve body with two or more ports, a diaphragm, and a seat upon which the diaphragm closes the valve. The valve is constructed from either plastic or metal. Health Diaphragm Valves have the reputation of being the "clean valves". The health diaphragm isolates the process media from the environment and all moving parts of the valve and so protecting the media from contamination while preventing it from interfering with the valve operation. The properly chosen diaphragm also provides exceptional steam resistance and long term durability. Global Health Diaphragm Valves key players include Crane, GEMU, ENG Valves (ITT), GEA, etc. Global top four manufacturers hold a share over 35%. Europe is the largest market, with a share about 40%, followed by North America and Japan, both have a share about 33 percent. In terms of product, Pneumatic Diaphragm Valve is the largest segment, with a share over 35%. And in terms of application, the largest application is Pharmaceutical Industry, followed by Food Industry, Biotechnology, etc.

The global Health Diaphragm Valves market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
