Abstracts

A health telemetry system is a technology-driven solution that enables real-time or near-real-time remote monitoring, collection, and transmission of physiological data from patients to healthcare providers. These systems typically integrate medical-grade sensors, wearable devices, mobile applications, and secure cloud-based platforms to capture a wide range of health metrics?such as heart rate, blood pressure, blood glucose levels, oxygen saturation, and electrocardiogram (ECG) readings?and transmit them wirelessly for clinical review, analysis, and intervention. By providing continuous, actionable insights outside traditional clinical settings, health telemetry systems support proactive care management, early detection of anomalies, and personalized treatment adjustments, making them particularly valuable for managing chronic conditions, post-operative recovery, and elderly care while reducing the need for in-person visits.

The global Health Telemetry System market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
