Report Overview

Hearing protection device refers to the device that helps protect the ear from damage due exposure to high noise levels. Hearing protection devices include earplugs, earmuffs, uniform attenuation earplug and hearing bands. Earplugs are hearing protection devices that are inserted in the ear canal to protect the ear. Earplugs are disposable and reusable. Earmuffs are hearing protection devices that fit over the entire external ear, including the lobe and seal against the side of the head with suitable cushion or pad. Uniform attenuation hearing protection devices are earplugs designed to provide more natural sound perception using acoustic filters, with nearly linear attenuation from 100 to 8000 Hz. Hearing bands are hearing protection devices that are used to seal the external opening of the ear to achieve noise attenuation. They are made of soft, rubber-like material that is held in place by a head band or suspension assembly.
