Abstracts

A hearing protection earplug is an ear protection device worn in or over the ears while exposed to hazardous noise and provide hearing protection to help prevent noise-induced hearing loss. Increasing industrialization in developing countries, increasing manpower in construction and manufacturing industries, and stringent government regulations on worker safety in developed countries are expected to drive the hearing protection equipment market revenue growth. Workers in the mining and construction industries need noise protection when operating loud machinery such as drills, generators, jackhammers and compressors, as continuous exposure to noise above 70 decibels can cause hearing loss. Many disciplines in construction and mining require workers to use equipment that is louder than 75 decibels. Demand for protective equipment such as earplugs is expected to continue growing in the coming years amid increased government scrutiny over worker protection issues.

The global Hearing Protection Earplugs market size was estimated at USD 961.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
