Report Overview:

Heart radiofrequency ablation apparatus is a medical device used to treat certain heart conditions such as arrhythmias. It uses radiofrequency energy to create heat and destroy small areas of heart tissue that are causing the abnormal heart rhythm. The apparatus consists of a catheter with an electrode at the tip that is inserted into the heart through a vein in the groin or neck. The electrode delivers the radiofrequency energy to the targeted area of the heart tissue, which creates a controlled lesion. This procedure is minimally invasive and can be done under local anesthesia. It is a safe and effective treatment option for patients with certain heart conditions.

The Global Heart Radiofrequency Ablation Apparatus Market Size was estimated at USD 1990.18 million in 2023 and is projected to reach USD 2953.39 million by 2029, exhibiting a CAGR of 6.80% during the forecast period.
