Report Overview

The heat based RF power sensors have the advantage that they are able to measure the true average power as the heat dissipated is the integral of the power input over a period of time. As a result these RF power sensors measure the RF power level independent of the waveform. Thus the measurement is true regardless of whether the waveform is CW, AM, FM, PM, pulsed, has a large crest factor, or consists of some other complex waveform. This is a particular advantage in many instances, especially as QAM, and other forms of phase modulation are being increasingly used and a these do not have a constant envelope.

This report provides a deep insight into the global Heat-based RF Power Sensors market covering all its essential aspects. This ranges from a macro overview of the market to micro details of the market size, competitive landscape, development trend, niche market, key market drivers and challenges, SWOT analysis, value chain analysis, etc.
