Report Overview

Heat dissipation ceramic substrate is a type of ceramic substrate used for heat dissipation, typically in high-power and high-density electronic devices. They are usually made of high-temperature-resistant materials such as alumina or aluminum nitride, and their surfaces are treated to be flat to improve the stability and reliability of components. The main feature of heat dissipation ceramic substrates is their high thermal conductivity and excellent heat dissipation performance, which effectively disperses the heat generated by the device, maintaining the normal operating temperature of the component and extending its service life. Heat dissipation ceramic substrates are widely used in LED lights, semiconductor lasers, power modules, automotive electronics, and other fields. Due to their excellent heat dissipation performance, heat dissipation ceramic substrates have become an indispensable component in modern electronic product design.
