Abstracts

Heat Dissipation Paste (HD-Paste), also known as thermal paste or thermal grease, is a specialized compound used to improve the heat transfer between heat-generating components and heat sinks or cooling systems. It is primarily applied in electronic devices, ensuring that components like CPUs, GPUs, and power transistors maintain optimal performance by preventing overheating. HD-Paste works by filling microscopic gaps between surfaces, enhancing thermal conductivity and preventing potential damage due to heat buildup. In terms of market development, the global heat dissipation paste industry is dominated by key players such as Dow, Parker Hannifin, Shin-Etsu Chemical, and DuPont, with the top four manufacturers holding over 20% of the market share. China leads in production, accounting for nearly 40% of the global supply, followed by North America and Japan. The increasing demand for HD-Paste in electronics, automotive, and renewable energy sectors is contributing to the market's growth, particularly in regions with strong industrial bases. Looking at future trends, the HD-Paste market is expected to expand as the demand for high-performance electronic devices and energy-efficient systems continues to rise. With the growing adoption of electric vehicles (EVs) and advancements in consumer electronics, the need for effective thermal management solutions will remain critical. Additionally, innovations in nanotechnology and the development of environmentally friendly, non-toxic thermal pastes will likely drive future growth, particularly in regions like China, where production is expected to continue leading the market. As the global focus on energy efficiency and sustainability intensifies, the demand for advanced thermal management solutions like heat dissipation paste is projected to rise. With the proliferation of electric vehicles (EVs), 5G infrastructure, and renewable energy technologies, the need for more efficient heat dissipation in high-performance electronics is becoming increasingly critical. Furthermore, the growing trend toward miniaturization in electronics and the use of higher-powered devices require thermal pastes that can handle greater heat loads

while maintaining durability. As a result, manufacturers are investing in research and development to create more efficient, long-lasting, and environmentally friendly HD-Paste products. This trend, along with the increasing adoption of advanced cooling systems, is expected to shape the future growth trajectory of the heat dissipation paste market.

The global Heat Dissipation Paste (HD-Paste) market size was estimated at USD 168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
