Abstracts

Heat insulated PVB film is a specialized interlayer material used primarily in laminated glass applications, designed to enhance thermal performance by reducing heat transfer while maintaining the structural and safety characteristics of standard polyvinyl butyral (PVB) films. It typically incorporates infrared-reflective or low-emissivity properties through the integration of metallic nanoparticles, ceramic coatings, or other advanced materials that selectively block solar heat radiation without significantly compromising visible light transmittance. This product serves as a critical component in energy-efficient glazing systems for architectural, automotive, and specialty sectors, contributing to improved insulation, reduced energy consumption for heating and cooling, and compliance with green building standards.

The global Heat Insulated Pvb Film market size was estimated at USD 230.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
