Report Overview

Heat Interface Units (HIUs) are compact, packaged systems designed to efficiently transfer thermal energy from a central or communal heat source?such as district heating networks, biomass boilers, or combined heat and power (CHP) plants?to individual buildings or apartments. By using plate heat exchangers, pumps, control valves, and metering devices, HIUs separate the primary network from the secondary circuits, delivering both space heating and instantaneous domestic hot water. Unlike traditional boilers or storage systems, HIUs allow for centralized heat generation while providing decentralized control, improved energy efficiency, and easier billing through individual metering.

The global Heat Interface Units (HIU) market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
