Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Heat Pump Integrated Modules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production reached approximately 5,225.8 K units, with an average global market price of around US\$ 263 per unit. As the automotive industry moves toward electrification and intelligent driving, the complexity of vehicle energy management is increasing, and the requirements for vehicle energy management systems are also rising. To more effectively meet the needs of future electric vehicles, integrated thermal management systems have become a clear trend. The advantage of integration is that products are more compact, which can simplify the vehicle's space layout, reduce piping layout, reduce costs, and reduce volume and weight. Heat Pump Integrated Modules, also known as thermal management integrated modules, are core components for the thermal management of new energy vehicles. By integrating components such as the water-cooled condenser, chiller, electronic water pump, electronic water valve, refrigerant integrated channel, water kettle and water channel, and liquid separator (customized according to user needs) into a single module, more precise temperature control and better heat distribution are achieved, ultimately improving vehicle performance. The core upstream components of Heat Pump Integrated Modules include electronic control components such as electronic water valves, electronic water pumps, shut-off valves, and electronic expansion valves; mechanical components such as heat exchangers, manifolds, and gas-liquid separators; and control components such as controllers. Major raw material suppliers include Denso, Valeo, MAHLE, Bosch, Sanhua, Yinlun, and Ningbo Tuopu Group. Downstream applications include thermal management for pure electric vehicles and plug-in hybrid vehicles, with typical customers including Tesla, BYD, NIO, Li Auto, and

Xpeng, etc. The annual production capacity of a single Heat Pump Integrated Module line typically ranges from 100,000 to 300,000 units, with significant variations depending on the scale and technical level of the production line. Gross profit margins generally range from 20% to 30%, and the gross profit margins of different companies' products are significantly affected by product complexity and raw material prices. By 2024, global electric vehicle sales will reach 17 million units, a year-on-year increase of approximately 25%, accounting for over 20% of the global auto market for the first time. In the first quarter of 2025, global electric vehicle sales will have increased by 35% year-on-year. China will continue to lead the market, with electric vehicle sales exceeding 11 million units in 2024, accounting for nearly half of domestic new car sales. The Chinese market's growth momentum remains strong heading into 2025. According to data released by the China Association of Automobile Manufacturers, in the first quarter of 2025, China's cumulative production and sales of new energy vehicles reached 3.182 million and 3.075 million units, respectively, representing significant year-on-year increases of 50.4% and 47.1%, respectively. New energy vehicle sales will account for 41.2% of total new car sales. As the penetration rate of new energy vehicles continues to rise, traditional automakers are accelerating their electrification transformation. Some are collaborating with technology companies to jointly develop new energy vehicle technologies and enhance the intelligence of their products. Others are increasing investment in infrastructure such as charging stations to provide consumers with more convenient charging services. The electrification transformation of traditional automakers will not only enhance their competitiveness but also drive the entire automotive industry towards a more environmentally friendly and intelligent future. With the rapid global penetration of new energy vehicles, market demand for Heat Pump Integrated Modules (HPIMs), core components that ensure battery safety and optimize driving range, is growing steadily. Pure electric vehicles rely far more heavily on precise temperature control than traditional fuel-powered vehicles, while the complex heat source management requirements of plug-in hybrid vehicles are further driving the adoption of integrated solutions. Whether it's intelligent heat pump systems for high-end models or low-cost liquid cooling solutions for economy cars, HPIMs have become an indispensable component of new energy vehicles. Currently, the global Heat Pump Integrated Modules market is primarily dominated by Chinese manufacturers such as Sanhua, Ningbo Tuopu Group, and Yinlun. In recent years, European manufacturers such as Mahle GmbH, Valeo, and Marelli have successively stepped up their efforts, gradually changing the market competition landscape. Riding the wave of new energy, China has attracted a large number of emerging players to enter the Heat Pump Integrated Modules field. Many of these companies have obtained project contracts from OEMs and are expected to achieve mass production within the next 1-2 years. By then, a competitive landscape will present a hundred schools of thought contending and

a hundred flowers blooming.

The global Heat Pump Integrated Modules market size was estimated at USD 1375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.00% during the forecast period.
