Report Overview:

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.

Heat resistant ABS (HH ABS) is a grade of ABS. It has the second highest strength and second lowest ductility compared to the other variants of ABS. This ABS resin offers superior heat resistance, shock resistance, and outstanding workability. It has wide-ranging use in items such as Automotive Usage parts, and electrical devices. In the report, the vicat softening temperature of high heat resistant is 109? and the vicat softening temperature of super high heat resistant is 115?.

The Global Heat Resistant ABS Market Size was estimated at USD 1556.59 million in 2023 and is projected to reach USD 2183.18 million by 2029, exhibiting a CAGR of 5.80% during the forecast period.
