Report Overview

Heat resistant bronze powder refers to powder made of various types of bronze or brass alloys, mainly used in lacquer or glazing medium, or together with copper powder paste (BRONING LIQOID) to form so-called imitation gold powder pigments. This powder can be used to replicate every shade of gold from light blonde, lemon to dark copper tones, sometimes with some dye added to the paint mix as well. Bronze powder will darken or fade in a short time. Bronze powders are rarely used in fine art because of their lack of permanence, and because the lacquers they make are dull and poorly grained.

The global Heat Resistant Bronze Powder market size was estimated at USD 593.80 million in 2023 and is projected to reach USD 929.10 million by 2032, exhibiting a CAGR of 5.10% during the forecast period.

North America Heat Resistant Bronze Powder market size was estimated at USD 168.55 million in 2023, at a CAGR of 4.37% during the forecast period of 2024 through 2032.
