Abstracts

Heat resistant coatings also known as passive fire protection or intumescent coatings provide protection to equipment and structures from fire or flames with high temperature. These coatings are used to protect the spread of fire or lessen the damage caused by fire to surfaces. Heat resistant coatings are mostly used in the Civil Construction and Oil and Gas industries. The automotive and other transportation industry in Asia-Pacific has been undergoing rapid growth in the recent years owing to the shifting manufacturing base from western economies. This is majorly due to the low costs of labor, along with the presence of large and approachable consumer base in the region. The automotive production in the region has been on the increase in the past few years and is expected to grow further at a significant rate, majorly in countries such as China, India, Indonesia, and Vietnam. Heat resistant coatings are employed during automotive manufacturing processes, majorly for automotive spline, exhausts, grills, and few electrical components. They aid in maintaining the color as well as providing necessary thermal and chemical resistance to the applied components. The booming automotive production activities in Asia-Pacific are expected to increase the consumption of heat resistant coatings in the region at a significant rate in the coming years.

The global Heat Resistant Coatings market size was estimated at USD 5312.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
