Abstracts

Heat sealable BOPP films are specialized biaxially oriented polypropylene films engineered with a heat-activated sealing layer, typically composed of copolymer coatings or coextruded layers, which enable them to form strong, hermetic seals at controlled temperatures without adhesives. These films are characterized by high clarity, excellent moisture barrier properties, dimensional stability, and good printability, making them ideal for flexible packaging applications such as food packaging (e.g., snacks, confectionery, and frozen foods), pharmaceuticals, and consumer goods where tamper-evidence, product protection, and aesthetic appeal are critical. The heat sealability feature allows for efficient, high-speed packaging on form-fill-seal machinery, contributing to their widespread adoption in industries demanding reliable, cost-effective, and sustainable packaging solutions.

The global Heat Sealable Bopp Films market size was estimated at USD 5820.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
