### Report Overview

Heat-treated flour is a new technology in the improvement of flour quality. Heat treatment of flour can change the quality characteristics of flour, and can also sterilize the flour, which may further replace the traditional chlorine treatment. In addition, heat-treated flour can also replace the higher-priced starch. Heat-treated flour enables food manufacturers to replace the chemically modified ingredients in foods and mixtures, thereby satisfying consumers and improving the product performance. Heat-treated flour is characterized by its ability to absorb moisture and its protein content that cannot form gluten when the flour is hydrated. Generally, heat-treated flour is divided into wet heat-treated flour and dry heat-treated flour according to the type of heat treatment.
