This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Heated Eye Masks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Heated Eye Masks reached approximately 110 million units, with an average market price of about USD 3 per unit, an annual production capacity of roughly 170 million units, and an industry-average gross margin of approximately 44%. Heated eye masks are short-use or disposable wellness products featuring a built-in self-heating layer or reaction material that generates warm steam around the eye region (typically 40-45 °C) when opened. They are designed to relieve eye fatigue, dryness, strain from screens, or to provide a relaxation spa-like experience. The product is typically composed of non-woven fabric substrate, the heating/steam layer, optional aroma or medicinal micro-additives, and single-use packaging. Its supply chain is structured as follows: upstream includes suppliers of heating chemicals, non-woven fabrics, fragrances/medicinal additives; down-stream includes e-commerce platforms, pharmacy/beauty retail chains, travel retail channels and end-consumers. Regarding cost structure, raw materials account for about 55% of total cost, labour & equipment depreciation about 20%, packaging & logistics about 15%, and marketing & channel fees around 10%. In terms of downstream consumption, based on global user groups and usage frequency, heavy screen-use individuals are estimated to use on average 6-10 masks per year, although actual usage varies by region, culture and work intensity.
